

A stainless steel manlid is a hinged access cover designed to provide safe and secure access to tanks, vessels and process equipment for inspection, cleaning and maintenance. Manufactured from high-quality stainless steel, Boyer® manlids are engineered for hygienic applications and are available in a range of shapes, sizes and pressure ratings to suit various industrial requirements.

Key Features:

- Manufactured from stainless steel (typically grades 304L or 316L).
- Hygienic design suitable for sanitary process applications.
- Hinged cover with a secure clamping or swing-bolt locking mechanism.
- Available in round, oval and rectangular configurations.
- Options available for atmospheric or pressure-rated applications.
- Corrosion-resistant construction for long service life.
- Designed to provide easy access for inspection, cleaning and maintenance.

Applications:

- Stainless steel storage tanks and process vessels.
- Food and beverage processing.
- Wine and brewery tanks.
- Pharmaceutical and cosmetic industries.
- Chemical processing.
- Water treatment and other hygienic process applications.
