

**BALL VALVES | PVC**

---

Ball valves are capable of throttling gasses, vapours or liquids. The PVC ball valves' ends are octagonal, as opposed to rounded, making them easier to install.

**Product application**

Due to the quick opening and closing ability of the valve, ball valves are useful in installations where there is a need to isolate pipe sections quickly in the event of emergency. They are also especially useful for low-flow situations.

**PVC valves:**

Materials:	PP/UPVC/TPE+PP
Size range:	15mm to 50mm
Pressure range:	10MPA
Temperature range:	-20 °C to 60 °C.
