

FIBREGLASS GRATING

Fibreglass grating is moulded plastic grating reinforced into one-piece fibre to achieve full strength and stiffness. It is made of high resin, which provides high resistance to electric current and a wide range of industrial chemicals.

This is highly supplemented by alternating layers of glass-fibre components grounded with a suitable resin. Available colours are green, grey and orange.

Features of fibreglass gratings

- Anti-slip
- Electricity resistant
- Waterproof
- Corrosion resistant

Mass per sheet

Sheet size	Panel depth		
	25 x 38	30 x 38	38 x 38
2440 x 1220	40.00	44.99	52.00
3660 x 1220	-		84.83
